DustSuppressOR

I have reviewed the composition and manufacturing process for the product DustSuppressOR

I confirm that the product is composed of biodegradable organic compounds and a base material manufactured in a fermentation process that is itself based on natural products derived from renewable resources.

No hazardous products are used at any stage of the manufacturing process and no hazardous products are formed in the manufacturing process.

The finished product exhibits Ultimate Biodegradability under anaerobic conditions as defined by US EPA methods (40 CFR Part 796.3180).
